

## **Cedar River Greenway – West Side Infrastructure Removal**

### **Energy Standards**

The project is for removal of infrastructure and energy efficiency standards should not apply.

The project will reduce future energy consumption by:

1. Having less wastewater to treat at the wastewater treatment plant.
2. Have less City equipment (including snow plows, street sweepers, sewer cleaning, etc.) reducing the amount of fossil fuels used.
3. Proposed greenway will include trails which will offer multimodal options for people traveling to work, shops, etc. reducing the amount of fossil fuel consumption.
